

Nesse mês, a revista Property Casualty 360º está divulgando reportagem interessante ("It's house fire season: Here are the 8 most common fire hazards in the home") sobre os oito principais riscos de incêndio em residências. Por exemplo, nos EUA, acontecem 360 mil incêndios/ano, com quase US\$ 8 bilhões de prejuízos.

Em cada citação (velas, fumo, parte elétrica, máquinas de lavar e secar, raios, crianças brincando com fogo, árvores de natal e cozinha), há uma análise dos dados, apresentando também em seguida dicas práticas para diminuir esses riscos.

Uma matéria de utilidade pública.

Cold weather increases the risk of house fires across the country.

A recent fire at a 16,000 square foot mansion on the waterfront in Anne Arundel County, Maryland, took the lives of six people including two grandparents and their four grandchildren. The cause of the fire, according to investigators, was a 16-foot tall Christmas tree that the owners left lit most of the time in the great room of the house. An electrical failure ignited the two-month-old tree, which swiftly fueled the fire in the rest of the house.
